

# Fire Safety Guidelines for Shrines

Install residential fire alarms and regularly maintain them. Early smoke detection makes the evacuation easily.

Regularly check the electrical wiring of shrine lamps for any damage, burns, or deformities.

**NG**

Store lighters, igniters, and combustible materials stored separately and keep them in a cool place, away from direct sunlight.

**NG**

Shrine lamps are always working. The insulation layer of the wires can degrade, leading to disasters. It is recommended to choose products with the "Product Safety Mark."

**NG**

When using incense and candles, keep them away from combustible materials like curtains or Joss paper to prevent ignition caused by wind.

Avoid bending, tying, or subjecting wires to prolonged heavy pressure. Do not use the extension cord beyond its maximum load capacity.
